- **Age:** 55
- **Blood Sugar (mg/dL):** 180
- **Systolic BP (mmHg):** 140
- **Diastolic BP (mmHg):** 90

Prediction Result

- **Status:** Positive

Medical Advice

Dear Patient,

Based on your current vitals and predictive analysis, you are likely diabetic. Please take the following steps:

1. **Schedule an appointment** with your primary care physician or an endocrinologist.
2. **Begin dietary changes:** Reduce sugar intake, increase fiber, and monitor carbohydrates.
3. **Start daily exercise:** At least 30 minutes of walking, 5 days a week.
4. **Monitor your blood sugar** regularly and maintain a log.
5. **Take prescribed medications** if advised by your doctor.

Early management can significantly reduce complications. We are here to support your journey to better health.
